# How this guide was built.

NOBO climb from the lowest calibrated elevation point after the previous listed mountain, capped at an 8-mile lookback.

Movement-only 1-10 score weighted toward ascent, steep grade, Rockiness V2.1, then descent - the same formula used by the Hoggcountry map.

Field caution: Terrain planning screen only. Weather, wet rock, fatigue, pack weight, daylight, closures, and current trail conditions can make any mountain harder.

|                                                    |                                                                                                                                                                                               |
